SOURCE:

1. The 1952 production quota of television tubes under the T-2 program was 74 percent fulfilled on 10 October 1952. Quotas for other tubes in this program were only 69 percent fulfilled on the same date.
2. The cathode department was making about 1,500 Type 5Z4 cathodes per day as of 28 November 1952. However, because the rate of waste is so high, it is proposed to add a third shift in the manufacture of these cathodes. The department has been working with two shifts.
3. The output of television tubes as of 28 November 1952 was 1,200 to 1,300 pieces daily.
4. Tube 7J5 has a single grid, the cross-sectional dimensions of which are: length, 4.3 mm; width, 1.85 mm; radius, 5 mm.
5. According to a traveler from Erfurt, the station RIAS cannot be received at that place. On short wave and medium wave, nothing. On the other hand, the Frankfurt station and NWDR-Hamburg are received very well.
